Frame Dimensions

Specify Frame Width & Frame Depth Settings

Note: *P.R.D. CG* has 4" of depth adjustment for growth. Depth is measured from front of back post to front edge of the seat frame. For back post location add seating/hardware thickness (typically 2") to client's actual seat depth.

Example: seat depth of 12" + back/hardware thickness of 2" = back post location set at 14"

Note: The *P.R.D. CG* has 6" of center of gravity (CG) adjustment on all adult frames. The default CG setting is 1 position forward of either the client's actual seat depth or the manufacturer's seat depth setting.
